What is PV system capacity ratio?

Usually in a photovoltaic power generation system, PV system capacity ratio R_s is the ratio of the rated power of the PV array to the PV inverter, which can be expressed as (3) $R_s = \frac{P_{pv,rated}}{P_{inv,rated}}$ Fig. 6. PV system capacity ratio and power limit. When the PV system capacity ratio is greater than 1, there will be excess power supply.

What is PV module capacity & solar inverter capacity ratio?

The PV module capacity and solar inverter capacity ratio are commonly referred to as capacity ratio. Reasonable capacity ratio design needs to be considered comprehensively in the light of the specific project.

Should inverter capacity and PV array power be rated at a ratio?

However, the authors recommended that the inverter capacity and PV array power must be rated at 1.0:1.0 ratios as an ideal case. In the second study, B. Burger tested the two types of PV panel technologies to match the inverter Danfoss products with the PV array-rated power in sites around central Europe.

How much damage does a photovoltaic inverter cause?

When the optimal PV system capacity ratio and power limit value are taken, the annual damage of the IGBT in the photovoltaic inverter is 0.847% and the net increase of power generation is 8.31%, realizing the increase of photovoltaic power generation while the annual damage of IGBT and power generation loss due to power limit is relatively low.
