How much do solar panels cost?

As of 2026, the average cost of residential solar panels in the U.S. is between \$15,000 and \$25,000 before incentives. This typically translates to about \$2.50 to \$3.50 per watt of installed capacity (more on price per watt below). The total price depends on your system size, location, roof type, and installer.

How to choose a residential solar panel?

So, if you live in a hot climate, ensure you pick a panel with a lower coefficient (-0.35%/°C is the industry average), as this will ensure better savings and higher energy production. Panel efficiency and wattage: Choose a residential solar panel with efficiency and wattage ratings that match your home's energy needs.

What is the relative cost of solar energy?

Another measure of the relative cost of solar energy is its price per kilowatt-hour (kWh). Whereas the price per watt considers the solar system's size, the price per kWh shows the price of the solar system per unit of energy it produces over a given period of time. $\text{Net cost of the system} / \text{lifetime output} = \text{cost per kilowatt hour}$
