---

While the technology of battery energy storage has advanced rapidly, the law surrounding the permitting and siting of such systems has often been slow to catch up.

The Generation and Energy Storage Section (GESS) of ESRB is responsible for enforcing GO 167-C to ensure safe and reliable electric generation and energy storage in California.

The development of battery energy storage projects requires navigating a complex web of state and local permitting processes. Understanding these requirements alongside the battery ...

While the technology of battery energy storage has advanced rapidly, the law surrounding the permitting and siting of such systems has ...

This document offers a curated overview of the relevant codes and standards (C+S) governing the safe deployment of utility-scale battery energy storage systems in the United States.

While examination of how non-electric energy storage facilities are regulated should inform regulation of battery energy storage, BESS do have some unique characteristics relative to other energy storage ...

While stationary battery storage is a new land use for most communities, all communities already have and likely regulate other forms of energy storage.

As the battery energy storage market evolves, understanding the regulatory landscape is critical for manufacturers and stakeholders. This guide offers insights into compliance strategies, safety ...

The new requirements take effect on January 1, 2026, and apply to both standalone BESS projects and BESS

## Does the battery energy storage system for communication base stations require approval now

facilities that are part of larger energy projects and proceed under the ...

Energy storage technologies and systems are regulated at the federal, state, and local levels, and must undergo rigorous safety testing to be authorized for installation in New York.
