As it has been described, most electricity generation in the Dominican Republic comes from thermal sources. Only 14% of the installed capacity is hydroelectric, with this percentage falling to below 9% ...

Despite the present administration's efforts to increase the installed capacity of electricity generation from renewable sources, the electric power sector continues to be one of the most ...

Overview
Renewable energy resources
Electricity supply and demand
Access to electricity
Service quality
Responsibilities in the electricity sector
History of the electricity sector
Tariffs and subsidies
As it has been described, most electricity generation in the Dominican Republic comes from thermal sources. Only 14% of the installed capacity is hydroelectric, with this percentage falling to below 9% when all the thermal self-generation is accounted for. The exploitation of other renewable resources (i.e. solar, wind) is very limited. However, this situation is expected to change following the enactment of in May 2007 of the Law of Incentives to Renewable Energy and Special Regimes (Law No. 57-07). Amon...

Santos stressed that the SIE is reviewing the regulations to recognize the specific contribution of BESS systems and encourage their implementation in the Dominican electricity market.

The average electricity price in the Dominican Republic has increased from ~\$122/MWh in 2023 to ~\$124/MWh in 2024. Since 2019, the average electricity price in the Dominican Republic has ...

With more than 90% of electricity dependent on imported petroleum, price spikes translated directly into budget deficits and economic contraction. Unlike some of its Caribbean ...

Government-backed reforms include strengthening the grid code to ensure reliable, affordable, and resilient electricity services; implementing effective mechanisms to improve the efficiency of ...

Unlike other energy commodities such as coal, oil and natural gas, electricity trade between countries is

Dominican republic nico electricity market

relatively limited as it is more technically complex and requires a direct cross-border interconnection.

Eliminating the Dominican Republic's reliance on imported oil requires diversification of energy sources used for electricity generation, in particular increasing the use of solar and wind energy and ...

In the coming weeks, the final results of the project will provide the Dominican government with relevant background information to evaluate its participation in the ETA mechanism ...

A pilot project is making it possible to provide electricity for a community in a rural location with a micro grid. Public participation (community energy) and collaboration with cooperatives are increasing ...
