-----

China is racing to develop a new generation of wind farms that can not only survive tropical cyclones, but also harness their power.

Visuals have emerged showing how the largest single-capacity floating wind turbine in the world withstood the impact of Super Typhoon Yagi, which struck with winds peaking at 139 mph (62 ...

Jilin Erlongxiang Xiangyang Engineering Wind Farm is a 1,000.5MW onshore wind power project. It is located in Jilin, China. According to GlobalData, who tracks and profiles over 170,000 power plants ...

The project is part of China's efforts to expand its renewable energy capacity, particularly in offshore wind power. It aligns with national goals to reduce carbon emissions and increase the...

It has launched two new onshore turbine models - the 7.8 MW SI-17578 and the 8.0 MW SI-18580 - both designed specifically for European wind conditions, presented at WindEurope in ...

The much-anticipated overseas expansion of Chinese offshore wind giant Mingyang could provide an important boost for the global supply of offshore wind power, according to a new ...

"Eurus Otoyo Wind Farm" - As a global organization that operates wind and solar farms around the world, Eurus Energy Group works with communities to develop optimal solutions and disseminate ...

To access additional data, including an interactive map of global wind farms, a downloadable dataset, and summary data, please visit the Global Wind Power Tracker on the Global Energy Monitor website.

From steppe to power source, China's wind energy sector is revolutionizing the country's electricity supply and taking on a global leadership role. With its vast landmasses in the north and an...

China has significantly increased its coal power capacity, reviving concerns about its climate-changing carbon
