In this perspective, we begin by exploring the rationale underlying adopting photothermal design as a viable approach to achieve effective de-icing. This is followed by an in-depth analysis of three core ...

In this study, we have designed and developed a novel type of flexible, robust, colorless, and transparent polyimide (PI) film with a photothermal self-deicing ability for the deicing of PV panels.

Brushed or sprayed onto the solar panel, the clear coating reportedly reduced snow and ice accumulation on solar panels, thereby enabling them to generate roughly 85% more energy ...

This validates our success in developing a photothermal, transparent, and superhydrophobic coating with excellent anti-icing capabilities, suitable for use on photovoltaic ...

Solar energy-facilitated icephobic films have emerged as clean and renewable materials, which can potentially solve energy loss problems during anti-icing/deicing applications.

This guide walks you through key chemicals for solar panel manufacturing and thermal systems: acids, solvents, glycols, and deionized water with detailed instructions.

Scientists from Poland have developed a new type of anti-icing coating for photovoltaic panels, which is based on transparent silicone epoxy resin and modified with two or three kinds of ...

Formulations were then applied using a Mayer rod on glass substrates, a well-established coating process used in the industry due to its structural simplicity and ease of scaling ...

To address this problem, we design a type of passive self-deicing composite films based on colorless fluorinated polyimide as a polymeric matrix and phosphorene (PR) nanoflakes as a light ...
