High project debt financing in Europe, including France, limited project profitability despite the reduced module costs. With 40 to 100 GW of unsold modules now in European warehouses, the French ...

In April 2023, President Emmanuel Macron announced plans to double the country's solar power capacity by 2030 and increase wind power by ...

This graph shows the average and maximum coverage rate of electricity consumption by solar generation, at monthly and annual granularity. The solar coverage rate corresponds to the proportion ...

Hydroelectric power is currently the primary source of renewable electricity, accounting for over 42% of France's renewable electricity in 2023. Approximately 33% of the renewable production is provided ...

France generated 539 TWh of clean power in 2025, the most of any EU country. France's largest source of clean electricity is nuclear (69%). Its share of wind and solar (13%) is below the EU ...

These regions currently have the largest installed capacities, accounting for 52% of France's total solar power in the third quarter of 2024.

The exponential growth of the solar photovoltaic energy sector in France has never stopped since its inception in the early 2000s.

This map shows the distribution of wind and solar photovoltaic power generation facilities in mainland France, aggregated by French department. The values displayed contain a partial estimate of ...

France: Solar electricity generation, percent: The latest value from 2023 is 4.63 percent, an increase from 4.58 percent in 2022. In comparison, the world average is 4.92 percent, based on data from 185 ...

Official and up-to-date data of France for all years of statistics, in an easy-to-read format. Analysis of solar

France solar power generation ratio

power generation with advanced tools for comparisons, trends, shares, and various metrics.
