What is electrical switchgear?

Electrical switchgear covers a wide range of essential components within a power system, such as switches, circuit breakers, fuses, isolators, transformers, disconnectors and control centres.

What is switchgear & how does it work?

Switchgear covers a wide range of components within a power system, such as switches, circuit breakers, fuses, isolators, transformers, disconnectors and control centres. The use of switchgear makes it possible for companies and domestic establishments to switch on and off the power.

What is a switchgear cabinet manufacturer?

A switchgear cabinet manufacturer is a company that produces switchgear cabinets. A switchgear cabinet consists of the doors and interior components that make up the cabinet and its functions. At Logstrup we do not only manufacture our own cabinets, but also support our customers with their existing cabinet solutions.

What does switchgear cover?

Switchgear does in general cover a wide range of components within a power system. These components are switches, circuit breakers, fuses, isolators, transformers, disconnectors as well as control centres. To make it an even safer solution the switchgear is enclosed in special manufactured cabinets.
