Are there technical gaps in PV electricity cost?

The results of the review of current practice and gap analyses in PV cost technical assumptions were presented in the report Review and Gap Analyses of Technical Assumptions in PV Electricity Cost . The results highlight that technical gaps generally exist across all PV project phases.

Are there gap analyses in PV cost technical assumptions?

With this information in hands, the consortium then performed gap analyses between the present practice and the state-of-the-art methodology. The results of the review of current practice and gap analyses in PV cost technical assumptions were presented in the report Review and Gap Analyses of Technical Assumptions in PV Electricity Cost .

Can PV technical risks affect the levelized cost of electricity?

In this report, we have presented the results of various analyses on how PV technical risks and the associated risk mitigation measures could impact the PV levelized cost of electricity. This is important as PV LCOE is an important factor influencing the investment-attractiveness of a PV project.

What is the discount rate for PV systems?

For discount rate, 4% is assumed. Additional information on the components behind the calculation of this discount rate can be found in . This scenario could be considered representing PV systems in mature markets such as Germany where high competition has driven the CAPEX and OPEX prices down and the market is less risky.
