How do I know if my solar system is leaking?

Unfortunately, it is very difficult to detect an earth leakage without specialised equipment, and often, even a trained solar professional can have trouble diagnosing an earth fault. Check the solar system performance data on the app and website, if available. Check the solar panels for dirt, leaves, mould, or shade issues.

Are there common faults with solar photovoltaic (PV) systems?

With the widespread adoption of solar photovoltaic (PV) systems, ensuring their efficient and stable operation is essential. However, during long-term operation, PV systems may encounter common faults.

How do I know if my solar panel is bad?

Check the solar panels for dirt, leaves, mould, or shade issues. Check the solar inverter for any warnings or faults. Check that the isolators are all on and that the circuit breakers have not tripped off. Check the grid voltage on the inverter display or app for over-voltage issues.

How do I know if my solar system is working?

Check the solar system performance data on the app and website, if available. Check the solar panels for dirt, leaves, mould, or shade issues. Check the solar inverter for any warnings or faults. Check that the isolators are all on and that the circuit breakers have not tripped off.

A solar panel is essentially an electronic sandwich. The filling is a thin layer of crystalline silicon cells, which are insulated and protected from the elements on both sides by sheets of ...
