Solar is set to make up 60% of this increase. Wind will also play its part, with 2022 offshore wind set to double 2020 capacity. China is expected to leapfrog the European Union and the ...

Explore how new technologies, business models, policies and investments could help address these challenges and accelerate growth in our 2022 renewable energy industry outlook.

In just over 15 years, the state has transformed its energy system from heavy coal and natural gas reliance to zero coal and more than 60% renewables, supported by battery storage as well as gas.

Continuing the tradition of welcoming the new year with our BIG stories wrap-up, we spotlight below the TOP 10 renewable energy solutions featured on designboom in 2022.

Today, wind power is one of the fastest-growing renewable sectors on Earth, and it's evolving into new, unexpected forms. Land-based wind farms have become familiar sights, but their ...

The associated Renewables 2022 dataset gives full access to all of the data available in this dashboard for the Renewables 2022 forecast, plus additional premium data for all sectors and ...

Renewables 2022 provides analysis on the new policies introduced in response to the energy crisis. This year's report frames current policy and market dynamics while placing the recent rise in energy ...

Energy articles synthesizes 2022-2025 peer-reviewed research on renewable energy, highlighting essential advances in storage, microgrids, AI, social equity, and environmental impacts.

In 2022 we will see further advances in engineering, bringing us more powerful and adaptable photovoltaic panels used for solar power generation and turbine blades used in hydro and ...

The findings suggest that the main maturation directions for emerging renewable technologies are towards

Latest renewable energy technology 2022

harnessing new untapped sources of renewables and combining energy generation with ...
