-----

Located on the Sahara's doorstep, Noor is the biggest solar power (CSP) plant in the world. Here, thousands of mirrors reflect the sunshine up at a spectacular tower, featuring a unique molten...

Located in California's Mojave Desert, the plant can produce 392 megawatts (MW) of electricity--enough to power more than 85,000 homes--using 173,500 heliostats, each built with two ...

In China, the pioneering next-generation mirror-solar power station has been officially launched in the Gansu Province. Thirty thousand mirrors direct sunlight onto towering 200-meter ...

So-called heliostats -- which are essentially mirrors -- reflect and focus the sun's rays onto one certain point. The bundled heat is then used to create steam, which spins a turbine that ...

Let's talk about this mirror. Its professional term is called 'heliostat'. As the name suggests, it is an optical device that reflects the sun's rays to a fixed position. There are more than 12,000 ...

This is amazing energy revolution in the Gobi Desert of China whereby thousands of perfectly spaced mirrors produce a spectacular show of concentrated solar energy.

Concentrated solar plants generate energy by focusing the sun's energy on a single point. Whether or not these mirror solar panel arrays become common, solar power is still on track to ...

This super mirror power station, built by Shouhang High-Tech Energy, spans 780 hectares, equivalent to over 1,000 standard soccer fields.

China has unveiled the world's first dual-tower solar thermal power station in the Gobi Desert, using 27,000 mirrors to generate renewable energy round the clock, a landmark in clean ...

Fields of heliostat mirrors focus sunlight on receivers located on centralized solar power towers. The receivers
