What is the national energy policy of Nicaragua?

Further electrification of end-uses, especially transportation, in conjunction with the decarbonisation of electricity generation, is an important pillar of clean energy transitions. The National Energy Policy of Nicaragua establishes a policy framework for the development and exploitation of renewable sources.

What is off-grid electrification in Nicaragua?

Off-grid electrification in Nicaragua today consists mainly of installing diesel mini-grids, operated by ENEL to serve some larger villages in remote rural areas, often at heavy financial losses which need to be financed by the Government of Nicaragua on a continuous basis. In a few cases hydroelectric and solar home systems have been implemented.

Why is infrastructure important in Nicaragua?

The Nicaraguan government considers the improvement of the infrastructure especially of energy service a key factor for economic growth and for the alleviation of poverty in rural areas.

What happened to the power sector in Nicaragua?

Go To Top Nicaragua's power sector underwent a deep restructuring during 1998-99, when the generation, transmission and distribution divisions of the state-owned Empresa Nicaraguense de Electricidad (ENEL) were unbundled, and the privatization of the generation and distribution activities allowed.
