-----

In order to continue using the current power pricing mechanism, some companies might rush to install PV systems before 1 June 2025, potentially leading to a surge in demand and an ...

China is transitioning to a market-driven framework for solar energy pricing, with the change set to take effect by June 1, 2025. The National Energy ...

The rapid expansion of China's PV industry has been driven by ambitious government policies, substantial investments in manufacturing capacity, and economies of scale that have ...

Experts warn that solar panel prices may rise in the coming months, ending a long period of declining costs. Gerard Scheper, CEO of European Solar, noted that this tax policy shift could ...

This decision introduces a new structural cost for all solar products exported from China, consolidating a shift in market dynamics after years of ...

In addition to price differences based on system size, there is variation in the price of stand-alone (no energy storage) distributed PV systems between states and within individual markets.

The reform focuses on three key aspects: allowing market forces to determine renewable power pricing, establishing a pricing and settlement mechanism that supports the long-term ...

The photovoltaic (PV) module market in China is experiencing a significant price surge, driven by recent policy adjustments and a rush to install projects before new regulations take effect.

In November 2024, China's Ministry of Industry and Information Technology released revised guidelines for the photovoltaic (PV) industry. The ...
