Can latent heat storage material be integrated into a milk pasteurizer?

Incorporating latent heat storage material into the pasteurizer is one of the solutions for the direct integration of solar collectors with a milk pasteurization system. The presented work is based on developing a latent heat storage integrated plate heat exchanger for the pasteurizer.

Can a novel pasteurizer be integrated with a solar milk pasteurization system?

The concept of integrating the novel pasteurizer with a solar milk pasteurization system is shown in Fig. 1. The direct integration approach can combine a solar collector with a pasteurizing system, allowing the solar energy to be effectively utilized for the pasteurization process.

Can a plate heat exchanger be used for milk pasteurization?

Lazaar et al. integrated evacuated tube collectors (ETC) with a plate heat exchanger (PHE) for milk pasteurization utilizing solar energy. They achieved a 73 °C pasteurization temperature with an efficiency of 80 %.

Can solar energy be used for pasteurization?

Solar energy can be utilized to meet this demand by integrating solar thermal collectors with the pasteurization system. However, the primary challenge with solar energy is its intermittent and fluctuating nature, which leads to fluctuations in operating temperature and heating capacity.
