Can lithium ion batteries be recycled?

Wang, J. & Guo, Z. Hydrometallurgically recycling spent lithium-ion batteries. in *Recycling of Spent Lithium-Ion Batteries: Processing Methods and Environmental Impacts* 27-55 (Springer, 2019). Wu, J. et al. Recent advancements in hydrometallurgical recycling technologies of spent lithium-ion battery cathode materials. *Rare Met.* 43, 879-899 (2024).

Why should we recycle end-of-life lithium-ion batteries?

Recycling end-of-life lithium-ion (Li-ion) batteries reduces our reliance on primary resources while also addressing waste management and disposal challenges. Recovering valuable materials such as cobalt, lithium, and nickel from used batteries significantly minimizes both environmental pollution and the carbon footprint of battery production.

What are the challenges and opportunities in lithium-ion battery recycling?

Key challenges and opportunities in lithium-ion battery recycling. Based on experiences from informal e-waste recycling in developing countries, where rudimentary methods such as manual dismantling, acid leaching, and open burning are performed under uncontrolled conditions, similar challenges are expected for EoL LIBs 27, 32, 66.

How can recycling Li-ion batteries help the environment?

Recycling Li-ion batteries offers a promising solution to these issues by recovering valuable materials from spent batteries and reducing the reliance on virgin mining. Recycling (104,105) is not only extends the lifespan of finite reserves but also reduces the environmental footprint of battery production.

By eliminating metallic current collectors in favor of a 3D carbon ber framework, the design reduces material intensity and enhances device performance. This circular approach supports UN SDG 7 ...

This paper deals with a critical analysis and perspective of key challenges and opportunities in lithium-ion battery recycling.

Synopsis This review emphasizes the environmental and resource challenges of lithium-ion battery waste and highlights sustainable recycling strategies that alleviate resource scarcity and ...

Repurpose waste lithium battery packs into energy storage

In this study, graphite waste recovered from the recycling of LIBs was successfully upcycled into an active graphite/rGO (reduced graphene oxide) composite oxygen electrocatalyst. ...

Driven by the rapid uptake of battery electric vehicles, Li-ion power batteries are increasingly reused in stationary energy storage systems, and eventually recycled to recover all the valued components.

Lithium-ion batteries (LIBs) are essential in modern energy storage, powering everything from electric vehicles (EVs) and stationary energy systems to portable electronics, relying on...

To address both economic and environmental concerns, this paper presents current status in establishing an industrial eco-chain, including repurposing utilization and recycling of end-of ...

Prevalent recycling technologies focus on processing only one type of spent cathode material, demanding high energy input and significant chemical consumption. Here, authors present ...

Repurposing end-of-life LIBs into Second-Life Batteries presents a viable solution, as many retain 70-80 % of their State of Health (SoH), making them suitable for extended use in ...

With the rapid growth of retired lithium-ion batteries, concerns over resource depletion and environmental impact have intensified. This review introduces upcycling as a promising alternative to ...
