---

China has brought the world's largest compressed air energy storage (CAES) power station into commercial operation, marking a major milestone in large-scale, long-duration energy storage.

A state-backed consortium is constructing China's first large-scale compressed air energy storage (CAES) project using a fully artificial underground cavern, marking a major step in the ...

At 10:00 AM, the plant was successfully connected to the grid and operated stably, marking the completion of the construction of the first national demonstration project of compressed air energy ...

As the world's first non-supplementary-fired compressed air energy storage power station, all devices in this project are the first sets, which pose challenges in both equipment...

On August 1st, 2023, IET and Zhong-Chu-Guo-Neng Co. Ltd accomplished a significant feat, that is, the successful integration test of a 300MW compressed air expander.

During peak hours of energy consumption, the plant burns natural gas to heat up the compressed air, which then expands and pushes the turbines of power generators. The plant has an ...

After completion, the project will achieve three world firsts in the field of compressed air energy storage: the world's first single-unit power, the world's first conversion efficiency, and the world's first energy ...

A state-backed consortium is constructing China's first large-scale compressed air energy storage (CAES) project using a fully artificial underground cavern, marking a major step in the...

Officially put into operation in May 2022, the project is the world's first non-supplementary combustion compressed air energy storage power station, achieving zero carbon SAES.

# Shanghai Compressed Air Energy Storage Power Station

The phase I constructs a 50MW/200MWh power station, adopting a combined energy storage scheme of compressed air + lithium battery. The compressed air installation capacity is ...
