What is a solar inverter?

Solar inverters are the heart of any solar energy system, converting the direct current (DC) electricity generated by solar panels into alternating current (AC) power for homes, businesses, or utility grids.

What are the different types of solar power inverters?

There are four main types of solar power inverters: Also known as a central inverter. Smaller solar arrays may use a standard string inverter. When they do, a string of solar panels forms a circuit where DC energy flows from each panel into a wiring harness that connects them all to a single inverter.

How does a solar panel inverter work?

And one of the most critical pieces is the solar panel inverter. Here's why: solar panels transform the sun's rays into DC (direct current) energy, but homes and power grids operate on AC (alternating current) electricity. The inverter functions as the bridge. It helps convert DC to AC.

Do you need a solar inverter?

Solar inverters are a necessary but often forgotten part of a home solar panel system since they convert sunlight into usable electricity for your home appliances. Without a solar inverter, you wouldn't be able to use those solar panels to power your home.

Confused about solar tech? Here's why knowing which type of inverter is best for solar panels can save you thousands.

A solar inverter is a critical aspect of most photovoltaic (PV) power systems, in which energy from direct sunlight is harnessed by solar panels and transformed into usable electricity.
