When solar projects reach the end of their expected performance period, there are several management options. They include extending the performance period through reuse, refurbishment, or repowering ...

This page outlines options agencies can consider when a photovoltaic (PV) system reaches end-of-life. Key resources are provided for more details on approaching this phase.

Solar electricity is growing rapidly, but can it really dominate the global energy system? Here is what it will take for us to power the planet on sunshine. Is solar power going to take...

Almost 70 gigawatts (GW) of new solar generating capacity projects are scheduled to come online in 2026 and 2027, which represents a 49% increase in U.S. solar operating capacity ...

Solar power is no longer the future; it's the present, and one of the most viable solutions for delivering affordable, sustainable energy to billions still lacking reliable access, particularly...

Learn what happens to solar systems after 25 years, including degradation, inverters, and options for recycling or repurposing. Understand how to plan for the end of life and continue ...

Solar and wind are now expanding fast enough to meet all new electricity demand, a milestone reached in the first three quarters of 2025. Ember's analysis published in November shows ...

The year 2024 was a true landmark year for solar power. Global solar installations reached nearly 600 GW - an impressive 33% increase over the previous year - setting yet another ...

We focus on identifying the existence of a tipping point for solar and wind, assuming that no further policy is adopted to usher in a solar and wind-dominated electricity system.

The end of the solar power generation system

One of the most ambitious solar projects in history is quietly heading for shutdown after just a decade of operation. The Ivanpah Solar Power Facility in California's Mojave Desert was once...
