-----

Using weathering steel as a material for photovoltaic mounting structures eliminates the need for anti-corrosion coating treatment, resulting in faster construction timelines and being ...

Weathering steel is made of common carbon steel by adding a small amount of copper, nickel and other corrosion resistant elements. It has the characteristics of high quality steel, such as ...

Weathering steels in PV mounting structures are proving to be one such effective technology. And as the carbon footprint for building and construction is a top priority area for China,...

The application of weathering steel for photovoltaic brackets not only eliminates the galvanized coating link, shortens the construction period and reduces the cost, but also avoids the environmental ...

The invention belongs to the technical field of metallurgy, and particularly relates to high-strength weathering steel for a photovoltaic bracket and a preparation method thereof.

To investigate the mechanical performance and failure characteristics of photovoltaic support bracket and connections with the cold-formed thin-walled high strength steel, 55 specimens ...

In order to achieve the effective use of resources and the maximum conversion rate of photovoltaic energy, this project designs a fixed adjustable photovoltaic bracket

In this paper, three types of weathering steel were developed as substitutes for galvanized steel Q235. The mechanical properties and wet-dry accelerated tests were carried out for ...

In order to respond to the national goal of “carbon neutralization” and make more rational and effective use of photovoltaic resources, combined with the actual photovoltaic substation project, a fixed ...
