As of September 2024, the Ferrero USA DeGiovanni Franklin Solar PV Plant, located in New Jersey, held the largest installed capacity in the United States, reaching 983 megawatts in each ...

According to US Energy Information Administration, 40% of U.S. Solar Energy Output is made possible through Utility-scale fixed-tilt solar photovoltaic plants.

The Major Solar Projects List is a database of all ground-mounted solar projects, 1 MW and above, that are either operating, under construction or under development.

OverviewGovernment supportSolar potentialHistorySolar photovoltaic powerConcentrated solar power (CSP)See alsoFurther readingA complete list of incentives is maintained at the Database of State Incentives for Renewable Energy (DSIRE). Most solar power systems are grid connected and use net metering laws to receive compensation for electricity that is not consumed on site and exported to the grid. New Jersey leads the nation with the least restrictive net metering law, and California leads in total number of homes which have solar panels installed...

The largest solar thermal power plant in the world is the 392 MW Ivanpah Solar Power Facility, in California. It deploys 173,500 heliostats each with two mirrors focusing solar energy on boilers ...

See all 1030 Solar power plants nationwide including their emissions and production

The United States Large-Scale Solar Photovoltaic Database (USPVDB) provides the locations and array boundaries of U.S. photovoltaic (PV) facilities with capacity of 1 megawatt or more. It includes ...

From 2030 to 2050, CSP CAPEX could fall to approximately \$3,150/kWe (EIA, 2022). The solar resource is prevalent throughout the United States, but the Southwest is particularly suited to CSP ...

What are the national-level solar power plants

The dataset includes ground-mounted solar facilities constructed through the end of 2021 with capacities greater than 1 MWDC. It includes more than 3,900 large-scale solar ground-mounted ...

Let's explore the largest solar power plants operating in the U.S. as of 2025, highlighting several key projects that are driving the nation's renewable energy transition.

Lawrence Berkeley National Laboratory compiled and synthesized empirical data on the U.S. utility-scale solar sector.
