Can solar energy be used in Haiti?

Solar energy offers interesting prospects in Haiti, by offering energy self-sufficiency to the most isolated cities, in the absence of a power grid. The country's location in the tropics gives it very strong solar energy potential. It is believed solar energy will play a fundamental role in access to electricity over the next 10 to 15 years.

What challenges does Haiti face in generating and distributing electricity?

Haiti faces significant challenges in generating and distributing energy reliably, and lack of access to affordable and reliable power significantly hinders investment and business development. The majority of electricity is produced using imported fossil fuels.

Does Haiti have electricity?

Haiti's largest electricity grid is the Port-au-Prince metropolitan grid. Some towns, such as Fort-Liberté; in the northeast, have an electricity distribution network, but have been effectively abandoned by the national utility EDH. Users thus have to rely entirely on small, privately owned generators to meet their electricity demand.

What are Haiti's potential power generating sites?

The procurement of fuel to reliably supply the turbines is a priority for the Haitian government. Other potential power generating sites include 10MW facilities planned for both Port-de-Paix and Jacmel and a 5MW array intended for Jeremie. Grand'Anse and Nippes Departments in the southern region were also target areas for smaller power facilities.

As Haiti confronts its ongoing energy challenges, solar power offers a promising path forward. The country's abundant sunlight makes it an ideal location to develop these projects.
