Solar energy is the most widely available energy resource on Earth, and its economic attractiveness is improving fast in a cycle of increasing investments.

Due to increased production, government subsidies, and mounting environmental concerns, the direct costs of solar and wind energy for ...

Renewables continue to prove themselves as the most cost-competitive source of new electricity generation. On an LCOE basis, 91% of newly commissioned utility-scale renewable capacity ...

One of the most transformative changes in technology over the last few decades has been the massive drop in the cost of clean energy. Solar photovoltaic costs have fallen by 90% in the ...

Solar and wind power generation have expanded much faster than natural gas-fired generation in the U.S., while the use of coal continues to ...

One might expect a decline in an industry that has recently lost significant federal support, but so far, the opposite has been happening. The ...

However, 2024 has brought immense challenges, with higher interest rates, tighter financing, and adverse policy shifts in key states contributing to over 100 solar bankruptcies based ...

On the good side, solar continued its run of astonishing growth, generating 35 percent more power than a year earlier and surpassing hydroelectric power for the first time.

And that power loss comes with a heavy financial burden: Sites above 100 MW averaged \$5,000/MW in annual revenue loss, surpassing the ...
