Currently, there are three modes of photovoltaic power generation, namely: silicon-based, thin film-based, and concentrating solar power generation. Comparatively mature, the silicon-based mode ...

The development of renewable energy represented by wind, photovoltaic and hydropower has increased the uncertainty of power systems.

The results show that the planning model can meet the needs of flexibility and economy, improve the transmission capacity of power grids, reduce the probability of renewable energy abandonment or ...

Zhanpeng Chen is an academic researcher. The author has contributed to research in topics: Renewable energy & Flexibility (engineering). The author has an hindex of 1, co-authored 2 ...

Biography Zhanpeng Xu received the B.S. degree from Sichuan University, Chengdu, China, in 2018, and the M.S. degree from Zhejiang University, Zhejiang, China, in 2021.

From innovative battery technologies to intelligent energy management systems, these solutions are transforming the way we store and distribute solar-generated electricity.

Find Zhanpeng Xu's articles, email address, contact information, Twitter and more

He is currently working with Electric Power Dispatching and Control Center of State Grid Jibei Electric Power Company Limited. His research focuses on the economy and flexible operation of microgrids.

We comprehensively evaluate concentrated solar power (CSP) potential in China across four dimensions: geographical, technical, economic, and CO2 mitigation, and extend the analysis ...
